min. 24 months

Dispergum K is a processing aid which acts as lubricant and shows a reducing effect on viscosity. It facilitates mixing and processing, saves energy by cooler mixing temperatures and lower viscosities and improves the dispersion of filler and other ingredients.

As mild peptizing agent in peptizable rubbers
Also suitable for extruded and moulded goods (CM, TM, IM) as well as for foamed products

For detailed description of technological effects and dosages see DOG-Kontakt 41.
